Introduction

Welcome to AimNxt! We are excited to introduce our new Testing courses. Whether you are looking to start a career in Software Testing or Manual Testing, AimNxt offers comprehensive training programs designed to equip you with the skills and knowledge you need to succeed.

Career Opportunities in Testing

Software Testing

- Quality Assurance Engineer: Ensure that software products meet quality standards before release.
- Automation Tester: Develop and run automated tests to streamline the testing process.
- Performance Tester: Assess software performance under various conditions to ensure stability and responsiveness.
- Security Tester: Identify and mitigate security vulnerabilities in software applications.
- Test Manager: Oversee the testing process, manage test teams, and ensure timely delivery of quality software.

Manual Testing

- Manual Tester: Execute test cases manually to identify defects in software applications.
- Test Analyst: Analyze requirements, create test plans, and design test cases for manual execution.
- UAT Tester: Conduct User Acceptance Testing to ensure the software meets user needs and requirements.
- Regression Tester: Perform regression testing to ensure new code changes do not negatively impact existing functionality.

- Test Lead: Lead manual testing efforts, mentor junior testers, and coordinate testing activities.

Why Choose AimNxt

- Industry-Experienced Trainers: Learn from professionals with extensive experience in the testing domain.
- Comprehensive Curriculum: Our courses cover both theoretical and practical aspects of testing to ensure a well-rounded education.
- Hands-On Projects: Gain practical experience by working on real-world projects and case studies.
- Updated Course Material: Our curriculum is regularly updated to reflect the latest industry trends and technologies.
- Flexible Learning Options: Choose from online or in-person classes to suit your schedule.
- Placement Assistance: Benefit from our strong industry connections and dedicated placement support to kickstart your career.

Course Content for Software Testing

Module 1: Introduction to Software Testing

- Basics of Software Testing
- Software Development Life Cycle (SDLC)
- Software Testing Life Cycle (STLC)
- Types of Testing: Functional and Non-Functional

Module 2: Testing Techniques

- Black Box Testing
- White Box Testing
- Grey Box Testing
- Boundary Value Analysis

- Equivalence Partitioning

Module 3: Test Planning and Documentation

- Test Planning
- Test Strategy
- Test Scenarios and Test Cases
- Test Data Preparation

Module 4: Automation Testing

- Introduction to Automation Testing
- Automation Tools: Selenium, QTP, TestComplete
- Writing Test Scripts
- Executing Automated Tests
- Analyzing Test Results

Module 5: Performance Testing

- Introduction to Performance Testing
- Performance Testing Tools: LoadRunner, JMeter
- Performance Test Planning and Execution
- Analyzing Performance Test Results

Module 6: Security Testing

- Basics of Security Testing
- Security Testing Techniques
- Common Security Vulnerabilities
- Tools for Security Testing: OWASP ZAP, Burp Suite

Module 7: Agile and DevOps Testing

- Introduction to Agile Testing
- Test Automation in Agile

- Continuous Integration and Continuous Testing
- DevOps Testing Practices

Module 8: Final Project

- Project on Software Testing
- Comprehensive Test Plan
- Test Execution and Reporting
- Project Presentation

Course Content for Manual Testing

Module 1: Introduction to Manual Testing

- Basics of Manual Testing
- Role of a Manual Tester
- Software Development Life Cycle (SDLC)
- Software Testing Life Cycle (STLC)

Module 2: Test Planning and Documentation

- Test Planning and Strategy
- Writing Test Scenarios and Test Cases
- Test Data Preparation
- Test Execution and Reporting

Module 3: Testing Techniques

- Functional Testing Techniques
- Non-Functional Testing Techniques
- Black Box Testing Methods
- White Box Testing Basics

Module 4: Defect Management

- Defect Life Cycle
- Defect Reporting and Tracking
- Defect Severity and Priority
- Tools for Defect Management: JIRA, Bugzilla

Module 5: User Acceptance Testing (UAT)

- Introduction to UAT
- UAT Planning and Execution
- UAT Test Cases
- UAT Sign-off Process

Module 6: Regression Testing

- Basics of Regression Testing
- Identifying Test Cases for Regression
- Identifying Test Cases for Regression
- Tools for Regression Testing

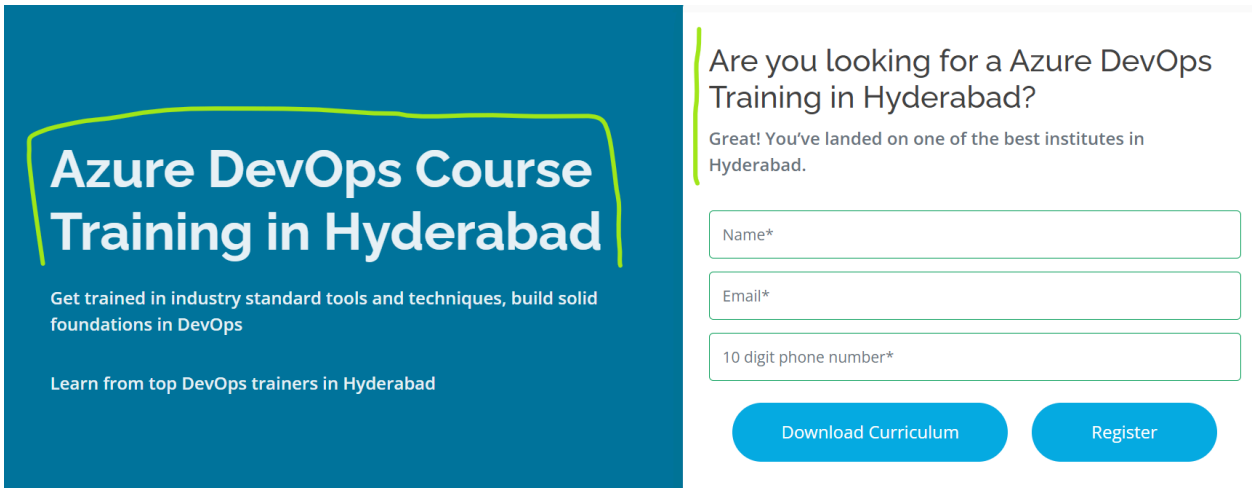

Module 7: Exploratory Testing

- Introduction to Exploratory Testing
- Techniques for Exploratory Testing
- Session-Based Test Management
- Reporting Exploratory Test Results

Module 8: Final Project

- Project on Manual Testing
- Comprehensive Test Plan
- Test Execution and Reporting
- Project Presentation
